

ABAP2XLSX - Version history

Current daily build: Version 7.0.6 (April 2016)

Changes to previous daily builds (roughly from memory)

- Built-in styles: Bugfix, Writer now supports this, added new constants for built-in styles
- Bugfixes Reader-2007 for reading column default styles
- Themes handling (classes zcl_excel_theme*). In the reader I've added loading of theme1.xml file. Color scheme and fonts are loaded to proper structure and can be updated, fmtscheme is at the moment copied from original file as well as object defaults, extracolors and extension list.
In case of new file default office theme is used(as previously).

Changes can be tested with DEMO37 just create simple excel with theme settings and use program to rewrite file. New DEMO42 program is also included to change theme settings

- ZCL_EXCEL_WORKSHEET:
 - - in method BIND_ALV optional parameter I_TABLE added so we can decide if we want to have formatted table in Excel or not
 - - in method BIND_TABLE optional parameter IV_DEFAULT_DESCR added to be able to control which description you want to use as a table header.
- ZCL_EXCEL_STYLE_NUMBER_FORMAT: GBP and PLN currency formats added

Current daily build: Version 7.0.5 (August 2015)

Changes to previous daily builds (roughly from memory)

Enhancements / New features

- Modified various Demoreports to demonstrate some of the features mentioned below
- Autofilters: Supports more filter-types
- Conditional Styles: Supports more style types
- Pane-freezing: Feature added
- Writerclass for really large files - does not support all features but is much faster
- Worksheet->Bind_Table: Runtime enhancements
- Wrapper for GET_GUID (outdated in newer releases)
- Pagebreaks: Feature added
- Cell-merging: Added features and exceptions
- Cell-coloring: New feature Gradient fill supported
- Graph: Allow stacked bars, more graph type supported

- Formulae supported by readerclass, May be shifted from cell to cell
-
- Generally more features supported by template reader
